Parameters	Result	Unit	Biological Reference Interval
<b>CA 15.3</b>			
CA 15.3 Breast Cancer Marker <i>Enzyme-Linked Fluorescent Assay-ELFA</i>	11.03	U/mL	<30

- Increased levels are also noted in few cases of carcinomas of ovary, colon, pancreas, lung and non malignant conditions such as chronic hepatitis, cirrhosis, sarcoidosis and Systematic Lupus Erythematosus.
- Sensitivity for serum CA 15-3 in patients with early breast cancer is 15-35% & hence is not recommended for screening & thus low levels of CA 15-3 does not exclude the presence of either primary or metastatic breast cancer.
- In patients with breast cancer where the serum CA 15-3 level is elevated, the tumour marker can be used to monitor response to therapy. CA 15-3 has been shown to detect 40-60% of relapses before clinical or radiological evidence of disease with a lead-time of between 2 and 18 months
