Remarks: This is a transcribed report and the test was performed at the laboratory OSL 17

- It aids in managing breast cancer patients when used in conjunction with clinical information and other diagnostic procedures.
- It is helpful in monitoring response to therapy in metastatic breast cancer patients. Increasing cancer antigen 15-3 (CA 15-3) assay values in patients at risk for breast cancer recurrence after primary therapy may be indicative of recurrent disease before it can be detected clinically and may be used as an indication that additional tests or procedures should be performed.
- Increasing and decreasing values show correlation with disease progression and regression, respectively.
