

UHID : 110159055  
 PATIENT'S NAME : MS W M A I WEERASINGHE  
 SCANNED REGION : MRI BOTH BREASTS  
 REQUESTED BY DR : DR KANISHKA DE SILVA  
 REFERENCE NO : RC01420937  
 DATE : 14-Oct-2025

PMR :  
 AGE : 35 Yrs  
 SEX : FEMALE  
 PLAIN :  
 ENHANCED : X

### MRI BOTH BREASTS

#### **FINDINGS :**

There is an irregular mass with slightly lobulated outline measuring 10mm in the lower lateral aspect of the left breast showing suspicious enhancement pattern corresponding to the ultrasonically detected mass lesion. There is a vague ill defined area of enhancement in the central part of the right breast with ill defined margins.

Linear well defined area of signal change with altered enhancement measuring 13 x 4mm seen in the right breast medially in the region of the 3 O'clock position showing non specific enhancement pattern.

Small non enhancing lesion seen in the central part of left breast.

Tiny non-mass like possible areas of ductal enhancement seen in either breast.

Rest of both breasts show normal parenchymal architecture.

No skin thickening or nipple retraction.

Chest wall is normal.

Small lymph nodes seen in either axilla.

### IMPRESSION

**Known suspicious mass in the lower lateral aspect of the left breast with altered signal of the adjacent breast parenchyma.**

**Prominent linear area of signal change in the medial aspect of the right breast is of indeterminate nature.**

**Lesions of benign nature in either breast.**

**Small non-mass like ductal enhancement noted in either breast.**

**Will arrange correlation with USS.**
